TECHNICAL SKILLS

Languages: Python, Java, JavaScript, TypeScript, SQL, C++, C, PHP, Go

AI/ML: Deep Learning, PyTorch, TensorFlow, Keras, Transformer Architectures, Microservices, CNN, Transfer Learning, Predictive Modeling, Data Visualization

Frontend: React, Next.js, AngularJS, Tailwind CSS, HTML5, CSS3, Three.js, Framer Motion, GSAP

Backend: Node.js, Express.js, Flask, FastAPI, Spring Boot, REST APIs, JWT Authentication, Docker, Git, AWS, AI-Assisted Development

Databases: PostgreSQL, MySQL, MongoDB, Firebase, Supabase, Redis, Database Design

Core CS: Data Structures & Algorithms, OOPS, DBMS, OS, Computer Networks, Distributed Systems, System Design

SUMMARY

- Software engineer with full-stack and applied AI experience, focused on owning products end-to-end. Independently trained and deployed a **CNN**-based computer vision system using **transfer learning**, raising detection accuracy from **85% to 98.2%**. Full-stack depth in **Python**, Java, and JavaScript/TypeScript (**Node.js**, Flask, **Spring Boot**), shipping REST APIs on **AWS**.

EDUCATION

SRM Institute of Science and Technology

August 2023 – May 2027

Bachelor of Technology in Computer Science Engineering

CGPA: 9.65

Kendriya Vidyalaya Sangathan

2021 – 2023

CBSE – Class X to XII

EXPERIENCE

Full Stack Developer Intern (Project-Based)

June 2024 – August 2024

Web & Cloud Applications

Remote

- Built and deployed **2+** full-stack web applications using **Python (Flask)**, **Node.js**, and **React**, implementing **20+ REST API endpoints** and delivering features from design to production.
- Containerized applications with **Docker** and deployed them on **AWS (EC2, S3, RDS)** using **CI/CD** pipelines, reducing deployment time by **40%** and improving release reliability through automated deployments.
- Participated in **Agile** sprints and peer **code reviews** within a cross-functional team, maintaining adherence to REST API design standards.

PROJECTS

ChickTech-AI | *Python, TensorFlow, Keras, Transfer Learning, CNN, Flask, Next.js, REST API*

- Link:** chick-tech-ai-diagnosis.vercel.app
- Applied **transfer learning** with a **multi-class CNN** architecture to independently train and deploy a real-time poultry disease detection model, building a continuous evaluation and performance-monitoring loop that raised detection accuracy from **85% to 98.2%**.
- Engineered a **REST API** layer connecting the model to a production frontend, profiling and resolving latency bottlenecks to cut API response time by **30%**.

Ascend Career | *React, TypeScript, Sarvam AI, Framer, Tailwind CSS, Gemini API*

- Link:** ascend-career.vercel.app
- Shipped a full-stack career platform that generates hyper-personalized career roadmaps for users.
- Integrated **Sarvam AI** voice support with 500-character chunking and silence detection, enabling natural, low-latency voice interactions.

Synapse UI | *Next.js 15, React 19, TypeScript, Groq API, PostgreSQL, Zustand, Framer*

- Link:** synapse-ui-beige.vercel.app
- Architected a modular workspace platform that uses **Groq APIs** to parse natural-language prompts into dynamically generated, data-populated dashboard layouts, removing the need for manual dashboard configuration.
- Designed a **PostgreSQL**-backed architecture with authentication and global state management.

CERTIFICATIONS

- Oracle Cloud Infrastructure 2025 Certified AI Foundations Associate**, Oracle
- Oracle Cloud Infrastructure 2025 Certified Networking Professional**, Oracle

ACHIEVEMENTS & LEADERSHIP

- Research Publication – ICCNet 2026:** Co-authored and presented "*ChickTech-AI: Automated Detection of Poultry Diseases through Transfer Learning and Multi-Class Convolutional Neural Network Classification*" at ICCNet 2026.
- Winner – PEARS Global Hackathon:** Designed, built, and shipped a working AI product end-to-end under strict time constraints.
- Finalist – CodeNex Hackathon:** Placed in the Top 3 Teams out of 200+ participants.
